

BUPT SCS-SE C++ Quiz – Unit 01/02 Overview and Basics

1. C++ supports 4 programming paradigms:: SP, OOP, FP and GP.
2. When we say “modern c++”, we usually refer to (C)
A. C++98 B. C++03 C. C++11 D. C++17 E. C++20
- 3.(F) T/F: A C++ IDE usually does not include a compiler.
- 4.(T) T/F: The extensions of C++ source files can be cpp or cxx.
- 5.(F) T/F: Special characters like TAB and page break are recommended in source files
6. Please point out the irregularities and errors in the following code

<code>#include #strike["iostream.h"]</code>	-> use <code><iostream></code> instead
<code>using namespace #strike[standard];</code>	-> use <code>std</code> instead of <code>standard</code>
<code>#strike[void] main() {</code>	-> use <code>int</code> instead of <code>void</code>
<code>cout << "I am okay.#strike[\n]" << endl;</code>	-> delete <code>'\n'</code>
<code>}</code>	

7. Please complete the following code

```
#include <iostream>
namespace aloha {
char* s = "Hello";
}

__int__ main() {
// output the string in namespace aloha
std::cout << aloha::s << std::endl;
return 0;
}
```

8. Write a program. Ask the user to input a number and save the number in variable n.

Print n lines of star “*”. You decide the length of the line. You must use C++ programming style.

```
#include <bits/stdc++.h>

int main(){
    int num;
    std::cout << "plz input an integer" << std::endl;
    std::cin >> num;
    for (int i = 0; i < num; i++){
        std::cout << "*****" << std::endl;
    }
    return 0;
}
```

9. Use your IDE to debug the program in quiz 8. Try “breakpoint”, “step in”, “step over”, “watch” in debugging. Modify the value of variable “n” in “watch” window

BUPT SCS-SE C++ QUIZ

and see what happens. Write down your own understandings of the above 4 debug techniques.

- **breakpoint:** Set the breakpoint can break the program when it runs to the breakpoint.
- **step in:** Execute the current line and the cursor would be passed to the next one.
- **step over:** Alike step in, yet it would NOT pass the cursor to the function cell it meets.
- **watch:** Values of arguments could be seen easily here. Easily to find out if the value of an argument is right.
- **Other debug techniques you have tried:** Refer to LOGS; Step out;
